About The Water North Coalition

The Water North Coalition (WNC), formed in 2014, is a collaborative effort; working together to find and implement northern solutions to water sourcing and water challenges, with a focus on advocacy, public education, attraction and retention and training.

Operating within northern Alberta, the WNCs vision is *“to ensure, through collaboration, that sustainable water systems are available to every northern community.”*

The Northern Alberta Development Council (NADC) supports the Water North Coalition through strategic advice and administrative support. If you wish to learn more about the WNC, please visit our webpage: <http://nadc.ca/our-business/partnerships/water-north-coalition/>

Water and wastewater management challenges often impact northern communities more acutely. Concerns such as geographic remoteness, aging workforce and infrastructure, and recruitment and retention issues can be felt across all northern communities. Following a strategic planning session, four subcommittees were formed to address the priority areas identified as training, advocacy, recruitment and retention and public education.

This document was created by the Public Education subcommittee in January 2018, with the primary intent of providing a resource for all municipalities, water and wastewater professionals, provincial and federal governments, water and wastewater operators, and any other individuals or groups interested in water and wastewater issues in Alberta’s north.
